

# CONSULTING IN GRC

The GRC model (Governance, Risk and Compliance) is used in organizations in order to manage them efficiently and effectively, taking into account the three components of the model so as to identify the source of a problem and alternative solutions: Taking into account the initiatives of corporate governments related to the high administration of the organization; considering the control on the part of the high management that allows to manage of effective form the risks, so much strategic as operative defining and implemen- ting the countermeasures to mitigate them; and complementing the previous activities with the regulatory requirements (already be legal or of internal norms) that must be fulfilled obligatorily.

## WHAT WE OFFER

**Platinum Ciber-Seguridad** assists its clients in the administration of all the aspects of security in the GRC framework required by the companies to be able to foresee them and to control them, in particular in:

**RISKS**

**COMPLIANCE**

**INCIDENTS**

**BUSINESS CONTINUITY  
MANAGEMENT**

**VULNERABILITIES AND THREATS**

## TOOLS

We use **R-Box**, a Information Security Management oriented tool to align information security with the business, through risk analysis and management, compliance with regulations, business continuity, etc.

The functionality of R-Box is built through modules, which provide different benefits according to the needs of each organization. The solution includes international methodologies such as MAGERIT, ISO 27005, NIST 800-53.
